

Prajeet Singh

Advanced Application Engineering Senior Analyst

6306226289 | prajetsinghkalchuri@gmail.com | [LinkedIn](#) | Gurugram

TECHNICAL SKILLS

Languages: C#, SQL, JavaScript, Python

Frameworks & Platforms: ASP.NET MVC, ASP.NET Web API, .NET Framework, REST APIs

Databases: Microsoft SQL Server, MySQL — stored procedures, triggers, views, CTEs, window functions, query optimisation, SSIS, SSRS

AI / ML (learning): Python, RAG, LLMs, vector databases, semantic search

Tools: Visual Studio, SSMS, Git, Azure DevOps

EDUCATION

Vellore Institute of Technology

2018 – 2022

Bachelor of Technology, Electronics & Communication

GPA: 8.74

PROFESSIONAL EXPERIENCE

Advanced Application Engineering Senior Analyst

06/2025 – Present

Accenture

Gurugram

- Owned end-to-end development, enhancement, and production support of business-critical Supply Chain Management applications serving a large Indian FMCG organization across multiple supply-chain functions.
- Led migration of 2 enterprise Supply Chain Management applications from Mendix low-code platform to ASP.NET MVC, delivering both to production on schedule with zero post-release critical defects.
- Drove adoption of scalable architectural patterns in C#, ASP.NET MVC, SQL Server, JavaScript, and REST APIs, improving long-term maintainability and reducing onboarding time for new engineers.
- Partnered with business stakeholders to translate complex operational requirements into production features, consistently delivering to agreed timelines.

Advanced Application Engineering Analyst

08/2022 – 06/2025

Accenture

Gurugram

- Delivered 20+ end-to-end business features for enterprise SCM applications built on C#, ASP.NET MVC, JavaScript, and SQL Server, supporting core supply-chain workflows for a leading FMCG organisation.
- Optimised 100+ SQL Server objects — stored procedures, functions, triggers, and views — cutting average query execution time by up to 40% and improving application responsiveness under peak load.
- Automated 10+ business workflows through backend and SQL enhancements, reducing manual processing effort by 50% and freeing operations teams for higher-value tasks.
- Diagnosed and resolved production incidents through systematic root-cause analysis, maintaining high application availability and preventing recurrence of recurring defect classes.
- Refactored legacy modules and tightened backend logic, reducing recurring defects and improving overall code maintainability across the application portfolio.
- Collaborated across the full SDLC — requirements, UAT, deployment, and production support — with business stakeholders and cross-functional teams.

PROJECTS

AI-Powered SQL Support Assistant | *Python, RAG, LLMs, Vector Search*

- Built a retrieval-augmented generation (RAG) system that ingests historical SQL scripts and resolution notes, converts them into vector embeddings, and performs semantic search to surface relevant past fixes when a new production issue is raised.
- Integrated an LLM to synthesise retrieved context into actionable resolution recommendations with relevant SQL and troubleshooting steps, reducing mean time-to-resolve for repeat incident patterns.

Bank Loan Default Prediction | *SQL, Microsoft SQL Server, Python, Pandas, Scikit-learn, SSMS*

- Performed large-scale analysis of 100,000+ borrower records using advanced SQL techniques including CTEs, window functions, aggregations, and multi-table joins to uncover patterns associated with loan defaults.
- Built data preparation and feature engineering workflows in SQL to create risk indicators such as debt-to-income ratios, repayment behavior trends, credit exposure metrics, and borrower segmentation attributes.
- Optimized data quality and validation processes through SQL-based cleansing, deduplication, and anomaly detection, ensuring high quality datasets for predictive modeling.
